A photograph of an industrial facility, likely a wastewater treatment plant. In the foreground, there are large, cylindrical stainless steel tanks. One tank in the center has the brand name 'A-STA' and 'TANK' visible on its side. To the left, there is a wooden structure and a large white bag. In the background, more tanks and industrial equipment are visible, including a control panel with various buttons and switches on the right wall. A window is visible in the upper left corner. The floor is concrete, and the overall environment appears to be a functional industrial space.

HWT

Equipment and Material List

- 500 liter water tank with automatic control and hot water heating
- 500 liter cold water tank
- Cargo lift with grid basket
- Centrifuge
- Circulation pump
- Treatment bag made of nylon fabric
- Scales
- Wire and wire drill unit
- Bag labels with wire
- Waterproof Sharpie (edding)
- Laboratory alarm clock-
- Drying racks, clean, free of foreign seeds, not defective, if necessary, paper sheets to place underneath
- Dehumidifier
- Drying boxes with blower, clean and free of foreign seeds, with fleece inlay if necessary
- Seed humidity meter
- New bags
- New paper bags for reserve samples
- New labels for sacks and paper bags

Max 6L in bags

Max 15 bags/treatment

Maximal weight of one bag

	Carrot	Pumpkin	Beetroot	Lamb lettuce	Parsley	Cabbage	Beans
Maximal weight [kg]	2,5	3,2	2,2	1,75	3,0	1,5	5,0
Maximal allowed humidity for storage [%]	9,0	8,0	12,0	8,5	8,0	7,0	< 14,0

Closing bags

Preheating at 32°C

Main treatment

Cooling in cold water
Max 5 minutes

Centrifuge

Active Drying

Passive Drying

Dehumidifier

Drying

Labeling

Filling in bags

Storage

Robila

Carrot • Gulerod • Wortel

Persika

Outdoor Cucumber • Frilandsagurk • Augurk

Azur Star

Kohl Rabi • Glaskål • Koolrabi

Red Kuri

Pumpkin • Græskar • Pompoen

Neckarriesen

Lettuce • Hovedsalat • Kropsla

Aromata

Parsnip • Pastinak • Pastinaak

Pantos

Pepper • Peber • Paprika

Avano

Leek • Porre • Prei

Rodelika

Carrot • Gulerod • Wortel

Zuckertraube

Tomato • Tomat • Tomaat

Rainbow Chard

colorful swiss chard • Flerfarvet sølvbede
Kleurrijke snijbiet

Golden Bantam

Sweet corn • Sukkermajs • Suikermajs

Wunder von Kelvedon

Pea • Markærte • Doperwt

Ocimum basilicum

Basil large leaves • Basilikum storbladet
grootbladige basilicum

Melissa officinalis

Lemon balm • Citronmelisse
Citroenmelisse

To summarize:

- Hot water treatment requires **specialized equipment**: heated and cooled water tanks, circulation pump, centrifuge, drying racks/boxes, humidity meters, and labeling systems
- **Treatment steps** include: bag preparation and closing, preheating at 32 °C, main treatment, cooling for max. 5 minutes, centrifugation, active or passive drying, labeling, and storage
- **Strict limits** are applied for treatment quality: max. 6 liters per bag and max. 15 bags per treatment
- **Correct execution of each step** is essential to balance pathogen elimination with seed viability
- **Documentation and labeling** ensure full traceability of each treated seed lot
